

# MOTO-X FOX '81

FIVE DOLLARS

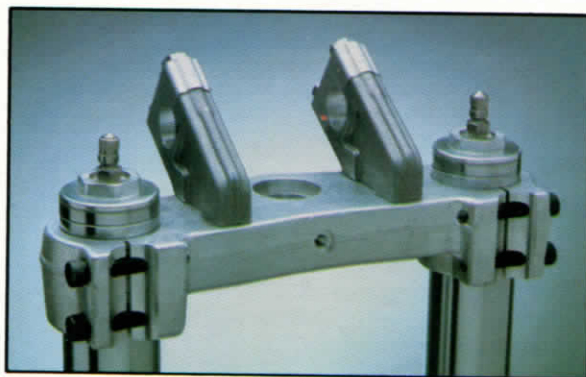

## FOX Factory Forx

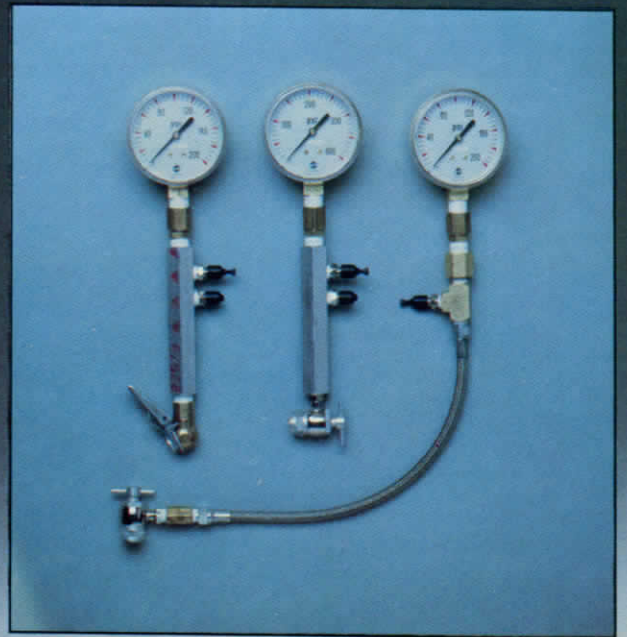

Fox Factory Forx have proven to be the finest accessory forks in the world. No other production type forks can match them for performance, adjustability, the strength and rigidity provided by the huge 44mm tubes that Fox Factory pioneered.

Even now that most production and factory works bikes have tried to imitate Fox Factory Forxs with larger 40-43mm forks of their own, Fox Factory Forxs still offer some very important advantages. Our heat-treated thinwall tubing actually allows our larger 44mm Fox Forxs to be lighter and stronger than the current crop of large diameter production bike forks. While the advanced design of our dampening rods with a large choice of optional dampening, the availability of optional positive and negative springs, all help Fox Factory Forx provide tuneability and performance that no other fork assembly can come close to matching.

"(The Honda works bike) forks are good, also. They are compliant and don't bottom harshly, but they aren't as good as the 44mm Fox Factory Forx. Don't be mistaken, they are good, but they don't match the strength or give the absolute steering precision of the giant Fox units."—Cycle World magazine, November 1980 in a test of the Honda RC AID 250 water-cooled works bike.
