THE PK STORY

OUR GUARANTEE: PK Racing Products serves the performance-conscious motorcycle enthusiast with dyno-developed and race-proven components. Everything we sell has been fully tested and carries a 90-day money back guarantee of workmanship and materials.

NEW OPERATING PHILOSOPHY: For a number of years we concentrated on small displacement products as a branch of one of the largest-volume Honda dealers in the United States. However, the manufacturing activities have outgrown this arrangement. PK Racing Products now operates independently and is in the process of building a wide-spread dealer network throughout the nation.

EXPANDED LINE OF PRODUCTS: In conjunction with this development, PK Racing Products' catalog has been expanded to include performance parts for larger displacement motorcycles. Other products for bigger displacement engines are currently undergoing testing. Our "ear to the ground" constantly discloses the need for more new products and we fully expect this Catalog to be outdated as rapidly as the last.

Paul Kaitz, Vice President
PK Racing Products

LOWEST PRICES, QUICK SHIPPING: When checking our price list, customers will find our products generally priced lower than competitors. This pricing is not achieved at the expense of quality. Our method of operation is simple. When we find a need for a product, a research and development project is started. Once we are satisfied with the prototypes, a full production line is established and the product is put on our shelves ready for shipping. By producing a quantity we can pass savings along to our customers, we can establish a price that is good until the stocks are sold, and we can ship with a minimum of delay.

PK RACING PRODUCTS

Frankly, the PK Racing Team does not win. We have our share of failures . . . and ideas that do not work. That is the whole idea of our race program. We'd sooner have the troubles ourselves than market a product that doesn't work, as good as it may seem in theory. We just *will not* release a product until it is thoroughly proven in use.

Much of our recent racing efforts have been in the minicycle field and we have made a specialty of the little bikes. We may be crazy but we have found the challenge of more than doubling the power from these little engines irresistible. Getting and keeping that power on the ground has led us into some interesting areas of frame and suspension design.

Our star rider, Jimmy Holley has been a great help in working out the details of our minicycle products. Minicycle Action magazine has called him a "guinea pig" yet, while testing new PK products, he has racked up more major titles in the last year than any other minicycle racer.

As Jimmy gets ready to show his stuff on motorcycles (still riding for PK Racing Products) so, too, have we moved into the "big bike" field. We now have performance products for the more dirt bikes and for some of the "sporty" street machines.

Only time will tell how Jimmy does on motorcycles but we are convinced he is a future international champion. As he helps us develop better and faster products for motorcycles, so we shall do everything in our power to help him in his professional riding career.

We are, naturally, grateful for the fine representation that Jimmy and Shaun give us. But even more important are the thousands of young riders around the country that regularly win on PK Racing Products. You may not always know what is inside their engines but it is a fairly safe bet that the regular winners have at least some of our equipment.

Our thanks to Jimmy Holley, Shaun Kelley, Bobby Jones, Dave Taylor and Dave Eropkin, for helping us win the following races:

- 1974—Invitational Minicycle World Championship
- 1975—World Mini Grand Prix
- 1975—NMA Saddleback Grand National
- 1975—100cc Class Hopetown G.P.
- 1975—Score off road World Championships
- 1976—A World Mini Grand Prix
- 1977—100cc Class Hopetown G.P.
- 1977—World Mini Grand Prix

This is just a few of the many wins accumulated by the PK team.

Like most reputable manufacturers of hop-up parts, we are constantly searching for the racing edge. This means that changes, sometimes small, sometimes radical, are constantly being made in our products incorporating these changes.
