

2:42 SECONDS in the life of a Tyran

Introducing the Tyran 125MX.

The bike that owns the turns.

Cycle World tested it for themselves. They found this new British entry delivers both handling and speed—the combination you need to win.

It's ready to race at only 190 pounds.

And it's got brakes you don't have to ask twice.

And its long wheel base gives you 54.5" of stability.

The frame's by Wassell, the Englishman who took the 1973 Queen's Award. The swingarm is Reynolds 531 tubing, the new featherweight alloy that comes on strong.

That super-light frame is powered by a Sachs 21 HP SAE engine. With a 6-speed, close shifting gear box. So you've got the extra power and response to start you on top.

And keep you on top.

Of the 30 machines bouncing off berms here in the U.S. since March, five have already pulled down first or second money in competition.

What more can you ask? A top notch contingency program. Check out the exciting new Tyran 125MX—plus Tyran's 250 and 400 models—at your dirty bike dealer today.

Tyran. We play dirty.

Dealer inquiries invited.
